January 22, 1957

# Wheat Seedings Reduced

Farmers have sharply reduced seedings of winter wheat. Crop Reporting Board says seedings for 1957 crop are down from '56 by nearly a fifth and down from average by almost a third. Such reduction indicates that farmers have weighed the drought threat in leading wheat States as well as the acreage-reduction inducements of the Soil Bank Plan.

#### More Moisture Needed

Much wheat in the Great Plains has made only a fair start...as of January 1, needed much more moisture to fortify plants and firm soils against cutting winds. Outside the Great Plains and parts of California, prospects are generally favorable for fall seedings of grains, legumes and grasses.

December snowfall was mostly light. More would be welcome for cover and moisture...will be badly needed to build snowpacks in western mountains to replenish irrigation water supplies, critically low in much of the Southwest.

# Hay Adequate, Scarce in Drought Areas

The 73.5 million tons of hay on farms January 1 were higher than the 1946-55 average by 5 percent and within 3 percent of the record high reached a year ago. Stocks will be adequate in total and ample in many sections, but are low in the central and southern Great Plains. Field forage cleanup by livestock, which lasted late and was unusually complete on most farms, has saved many tons of high priced hay.

#### Lower Wheat Stocks

Stocks of wheat on farms January 1, at 293 million bushels, are 8 percent below a year earlier and 21 percent less than the 1946-55 average of 368 million. Farm stocks are the lowest since 1941. About one-fourth of the farm stocks on hand January 1 was wheat from the 1956 and earlier crops under Government loan, about the same percentage as a year earlier.

## Other Stocks on Farms, January 1

Corn--2,331 million bushels, second only to the record in 1949 of 2,480 million. Current farm stocks are 5 percent above year ago and 13 percent above the 1946-55 average.

Oats--696 million bushels, smallest for January l since 1940. Current farm stocks are a fourth smaller than the 942 million a year earlier and one-sixth less than 10-year average. Farmers held less of this grain on January l than a year earlier in all regions except the South Atlantic States.

Barley--160 million bushels, down from a year earlier by 32 million but 34 million more than the 10-year average. Four States (North Dakota, Montana, Minnesota, California) had three-fifths of the total January 1 farm holdings.

Sorghum Grain--59 million bushels, 18 percent less than the 72 million a year ago but considerably above the 48 million average.

Rye--7.3 million bushels, only about half as large as the previous year but 13 percent above average. Two-thirds of the farm holdings were in Minnesota, the Dakotas, and Nebraska.

Soybeans--169 million bushels, highest of record. These farm stocks are 45 percent above a year earlier and 14 percent above the previous high reached in January 1955. The 1946-55 average January 1 farm stocks, only 79 million bushels. Farm stocks of soybeans are higher than last year in all producing areas. But, as usual, the bulk of the farm storage is in the North Central States--largely in Illinois, Minnesota, and Iowa.

Flaxseed--22 million bushels, record high, 31 percent above a year ago, and topping the 10-year average by 83 percent. Nearly 71 percent of the total is in North Dakota, with most of the remaining stocks located in Minnesota, South Dakota, and Montana.

## More Oranges Than Last Season

The 1956-57 orange crop (including tangerines) is expected to total 139 million boxes, 1.5 million

more than last season and about 20.3 million above average. Forecast is broken down as follows: Early and Midseason oranges, 71 million boxes; Valencias, 63 million; tangerines, 5 million.

## Smaller Grapefruit and Lemon Crops

Grapefruit production, forecast at 43 million boxes, will be about 5 percent less than last season and 10 percent below average. California lemon crop, at 13.6 million boxes, will be about a million boxes less than last season but nearly a half million more than average.

## Big Crop of Winter Potatoes

Production of winter potatoes, forecast Jan. 1 at 7,570,000 hundredweight, would be 44 percent above the 1956 production of 5,260,000 cwt and more than double the 1949-55 average of 3,554,000 cwt. The January forecast is up from that of December by 125,000 cwt.

Growers of late spring potatoes report intentions to plant 170,800 acres in '57. This would top the acreage a year ago by 3 percent but would be about 9 percent under that of '55.

#### Record Production of Seed Potatoes

Certifying officials in 29 States reported that 51,574,355 bushels of certified seed potatoes were

<sup>&</sup>lt;sup>1</sup> January - December

<sup>3</sup> By commercial hatcheries.

produced in 1956, largest production of seed stocks of record. It exceeds last year's total by 24 percent and is 18 percent larger than the 1945-54 average. Bulk of the increase is in Maine, the leading potato producing State, and in North Dakota, Minnesota, California, and Oregon.

# Milk Output About Steady (Per-Capita)

Milk production in December, at 9,278 million pounds, was I percent above that of a year earlier and 15 percent above the 1945-54 December average. On a per capita basis, the daily rate of 1.77 pounds for each person was the same as a year earlier, but higher than the 10-year December average of 1.72.

Production in the 12 months of 1956 totals nearly 127 billion pounds (tentative) compared with 123.5 billion in '55 and 117.1 billion for the 1945-54 average. Final production figures for 1956 will be published February 14.

Production per milk cow in crop reporters' herds on January 1 averaged 18.21 pounds...above

<sup>3</sup> Department of Commerce.

previous record high of 17.40 for January 1 last year and 25 percent above average for the date.

# Record Egg Production

The 60,837 million eggs produced in 1956 was a record--2 percent above 1955 and 7 percent above the 1945-54 average.

Hens laid 5,241 million eggs in December, also a record for the month. Compares with 4,976 million in December 1955 and 4,420 million the 10-year average.

The yearly rate per layer on hand in 1956 was 196 eggs, compared with 192 in 1955 and the average of 170.

#### Small Increase in Layers

The 337.6 million layers on hand January 1 compared with 332.4 million a year earlier. Number increased 1 percent last month, from December 1 to January 1, compared with a 1 percent decrease a year earlier and the 10-year average increase of 2 percent. Potential layers (including all pullets as well as laying hens) totaled 364.4 million January 1 up 1 percent from a year earlier, but 10 percent below average.

# Farmers Get Less for Eggs and Poultry

Eggs averaged 37.1 cents per dozen to farmers in mid-December. This compares with 37.2 in mid-November and 47.1 in December 1955. Farm chickens and commercial broilers brought producers an average of 16 cents per pound liveweight in mid-December compared with 19 cents a year earlier. Farm chickens averaged 13.5 cents, commercial broilers 16.9 cents compared with 17.9 and 19.4, respectively, year earlier.

#### Poultry Feed Higher Than Year Ago

Cost of the poultry ration, mid-December prices, was \$3.56 per 100 pounds compared with \$3.54 in mid-November and \$3.38 a year earlier. The egg-feed, chicken-feed and turkey-feed relationships were all less favorable than a year earlier.

# Fewer Winter Vegetables

Winter vegetable production in 1957 is expected to be about 7 percent less than in 1956, though about 3 percent above average. Decline is principally due to drought and shortage of irrigation water in Texas. Sharpest reductions from 1956 are for beets, cabbage, carrots and lettuce; smaller crops also of lima beans, broccoli, celery, shallots, and spinach. Increases are expected for artichokes, brussels sprouts, cauliflower, sweet corn, cucumbers, escarole, green peppers, and tomatoes.

## 1957 Hog Prospects

The 1956 fall pig crop was down 4 percent and farmers planned December 1 to reduce the spring pig crop 2 percent. This indicates that hog slaughter during most of 1957 will remain below 1956, though by year's end the difference is expected to be small. Prices of hogs during most months of 1957 and perhaps throughout the year will likely be above 1956. (More details in the January "Livestock and Meat Situation," AMS, USDA.)

## 4 Percent More Cattle on Feed

Cattle and calves on feed for market in the U. S. January 1, estimated at 6,099,000, were up 4 percent from a year earlier. In the North Central States, numbers were up 5 percent while only a slight increase occurred in the 13 Western States.

# More Sheep and Lambs on Feed

The total of 4,468,000 sheep and lambs on feed for market in the U.S. January 1 was up from a year ago by 207,000 head or by 5 percent. The number for the 11 Corn Belt States, 2,424,000 head, was 10 percent more than the number on feed in those States a year earlier.

#### More Schools in Special Milk Program

The number of schools taking advantage of USDA's Special Milk Program in September 1956 had increased 33 percent over the number a year earlier and milk consumed under the program increased about 40 percent.

# Increase in School Lunch Participation

The number of children taking part in the National School Lunch program continued to increase in September, with the number of schools taking part up nearly 5 percent over September 1955.

Federal funds available for this program were increased from \$83 million in 1955-56 to \$100 million for the current fiscal year. States and local communities contribute about \$4 in funds and services to each \$1 provided by the Federal Government.

## Farm Employment Continues Downward

The 5,811,000 persons (farm family and hired) at work on farms late in December were fewer than a year earlier by about 4 percent, continuing the downward trend. The number of hired workers decreased only 2 percent; family workers, 5 percent.

## Farm Wages Higher

Farm wage rates are at a record high level for the country as a whole. Seasonally adjusted wage rate index for January 1 was 554 compared with 522 a year earlier, and composite rate per hour was  $78\frac{1}{2}$  cents compared with 74 cents year earlier. January 1 farm wages averaged higher than a year earlier in all geographic regions.
